

Futura GTS Internet Filtering System

The Futura GTS Internet Filter manages your Internet connection and filters out objectionable websites, file downloads, viruses and more.

Key Features . . .

Active Web Page Blocking

Using **Keywords** in multiple languages (e.g. the words “pornography”)

Using **Categorized Lists** of web sites (e.g. www.badsite.com)

Peer-2-Peer Blocking

Blocks programs like Kazaa, Limewire, WinMX, eDonkey which can be used to download pornography

Time-based Internet Shut-Off

Disable all Internet usage between 12:00am and 6:00am for example

Computer-based Internet Shut-Off

Disable Internet completely for certain computers

Accurate Reporting and Easy Management

Web-based access to reports of the web sites most visited, most blocked etc.

Why is this filter is better than a program* installed on your computer?

- Much more difficult for users to bypass or disable
- Will not slow down or crash your computer, nor conflict with other programs
- Active filtering based on keywords, not just lists of good and bad sites
- Filters all your computers from a central point
- No configuration required on most the home computers

- for example Cyber Patrol, Net Nanny, Norton Parental controls, ContentProtect, CYBERSitter, McAfee, WebWasher, BsafeOnline.

•
